Advanced Clinical Decision Support System

Patient Name: Test User1		MRN: MRN-1768632002882
Age: 85	Gender: Male	Assessment Date: 2026-01-17 12:10
Overall Risk: Critical		Risk Score: 51.8/100

## Clinical Assessment (SOAP Notes)

### CLINICAL DECISION SUPPORT REPORT

Patient: Test User1  
Assessment Date: January 17, 2026  
Report Type: AI-Assisted Risk Stratification

#### Clinical Summary

Overall Risk Stratification: Critical (51.8%)  
High-Priority Concerns: Kidney Disease

#### Multi-System Risk Stratification

##### Critical Risk Conditions

Kidney Disease (Risk Score: 91.0%)  
- Risk Factors:  
Elevated creatinine may indicate reduced kidney function.  
Hypertension is a major contributor to kidney damage.

##### High Risk Conditions

Stroke (Risk Score: 57.92%)  
- Risk Factors:  
Hypertension significantly increases stroke risk.

##### Moderate Risk Conditions

Heart Disease (Risk Score: 49.93%)  
- Risk Factors:  
Risk inferred based on combined clinical feature patterns.

##### Low Risk Conditions

Diabetes (Risk Score: 8.36%)

*Advanced Clinical Decision Support System*

## - Risk Factors:

Risk inferred based on combined clinical feature patterns.

## Clinical Recommendations

### Priority Actions:

- Comprehensive clinical evaluation recommended
- Consider specialist referral based on risk profile
- Initiate appropriate diagnostic workup
- Discuss risk modification strategies with patient

### General Clinical Approach:

- Review patient's complete medical history
- Perform focused physical examination
- Order confirmatory laboratory/imaging studies as indicated
- Develop individualized care plan
- Schedule appropriate follow-up intervals
- Provide patient education on risk factors

## Suggested Further Investigations

- Carotid ultrasound, brain MRI/CT, lipid panel
- Complete metabolic panel, urinalysis, eGFR, kidney ultrasound

## AI Model Information

### Models Used:

- Heart Disease: Machine Learning Risk Prediction Model
- Stroke: Machine Learning Risk Prediction Model
- Diabetes: Machine Learning Risk Prediction Model
- Kidney Disease: Machine Learning Risk Prediction Model

Confidence Level: Based on available clinical data and model training

## Professional Disclaimer

Clinical Decision Support Tool - Professional Use Only

This report is generated by machine learning models trained on clinical datasets. The risk scores and

assessments are intended to support, not replace, clinical judgment.

## Limitations:

- Models may not capture all clinical nuances
- Risk scores are probabilistic, not deterministic
- Individual patient factors may not be fully represented
- Models require validation against clinical findings

## Recommendations:

- Use this report as one component of comprehensive clinical assessment
- Correlate AI findings with clinical examination and patient history
- Order confirmatory tests as clinically indicated
- Apply professional judgment in all diagnostic and treatment decisions

**Liability:** This tool provides decision support only. Final diagnostic and treatment decisions remain the responsibility of the attending physician.

## Patient Care Summary

---

### HEALTH SCREENING REPORT

Patient: Test User1

Report Date: January 17, 2026

### Executive Summary

This health screening has identified critical risk areas that require prompt medical attention. 2 condition(s) show elevated risk levels. We strongly recommend scheduling a consultation with your healthcare provider for comprehensive evaluation and personalized care planning.

### Overall Health Risk Assessment

Risk Level: Critical

Risk Score: 51.8%

Primary Areas of Concern: Kidney Disease

### Detailed Risk Analysis

#### Heart Disease

# AI DOCTOR ASSISTANT

*Advanced Clinical Decision Support System*

Risk Level: Moderate (49.93%)

What This Means:

The screening indicates a moderate risk for Heart Disease. Some risk factors are present, and lifestyle modifications along with regular monitoring are recommended.

Why This Risk Exists (Contributing Factors):

1. Risk inferred based on combined clinical feature patterns.

Clinical Context:

Low likelihood of Heart Disease at present.

Recommended Actions:

Blood pressure and lipid management

Guidelines suggest considering antiplatelet or statin therapy where appropriate

Stress testing or cardiology referral if clinically indicated

---

Stroke

Risk Level: High (57.92%)

What This Means:

The screening shows an elevated risk for Stroke. Multiple risk factors have been identified that suggest you should consult with a healthcare provider for further evaluation.

Why This Risk Exists (Contributing Factors):

1. Hypertension significantly increases stroke risk.

Clinical Context:

Low likelihood of Stroke at present.

Recommended Actions:

Risk factor control including hypertension and diabetes

Lifestyle modification

Neurology consultation for high-risk cases

---

# AI DOCTOR ASSISTANT

*Advanced Clinical Decision Support System*

## Diabetes

Risk Level: Low (8.36%)

### What This Means:

The screening shows a low risk for Diabetes based on current indicators. Continue maintaining healthy habits and regular check-ups.

### Why This Risk Exists (Contributing Factors):

1. Risk inferred based on combined clinical feature patterns.

### Clinical Context:

Low likelihood of Diabetes at present.

### Recommended Actions:

Lifestyle modification including diet and regular physical activity  
Guidelines suggest considering Metformin as first-line therapy  
Regular monitoring of HbA1c and blood glucose levels

---

## Kidney Disease

Risk Level: Critical (91.0%)

### What This Means:

The screening indicates a significantly elevated risk for Kidney Disease. This means several risk factors are present that warrant immediate medical attention and further testing.

### Why This Risk Exists (Contributing Factors):

1. Elevated creatinine may indicate reduced kidney function.
2. Hypertension is a major contributor to kidney damage.

### Clinical Context:

High likelihood of Kidney Disease based on current clinical indicators.

### Recommended Actions:

Monitoring serum creatinine and eGFR  
Blood pressure optimization  
Nephrology consultation recommended for progressive risk

## General Health Recommendations

### Lifestyle Modifications:

- Maintain a balanced diet rich in fruits, vegetables, whole grains, and lean proteins
- Engage in regular physical activity (at least 150 minutes of moderate exercise per week)
- Maintain a healthy weight (BMI 18.5-24.9)
- Limit alcohol consumption and avoid tobacco products
- Manage stress through relaxation techniques, adequate sleep, and social support

### Monitoring:

- Schedule regular health check-ups with your healthcare provider
- Monitor your blood pressure, blood sugar, and cholesterol levels as recommended
- Keep track of any new or changing symptoms

### Prevention:

- Stay up-to-date with recommended health screenings
- Take prescribed medications as directed
- Maintain good sleep hygiene (7-9 hours per night)
- Stay hydrated and limit processed foods

## Next Steps

### Immediate Actions Required:

1. Schedule an appointment with your healthcare provider within the next 1-2 weeks
2. Bring this report to your appointment for discussion
3. Be prepared to discuss your symptoms, medical history, and lifestyle
4. Your doctor may order additional tests or imaging studies
5. Do not make any medication changes without consulting your doctor

### When to Seek Emergency Care:

- Severe chest pain or pressure
- Difficulty breathing or shortness of breath at rest
- Sudden severe headache or vision changes
- Loss of consciousness or severe confusion
- Any symptoms that feel life-threatening
